

METHODOLOGY

DOCUMENT

1. Objective

The objective of this assignment was to identify and research companies located in Pune that match DeepThought's ideal customer profile (Federer Profile). The focus was on specialized manufacturing, biotechnology, medical devices, specialty chemicals, precision engineering, technical textiles, and related industries. The goal was to create a qualified list of companies based on available public information and evaluate their suitability according to the Federer criteria.

2. City Selection

Selected City: Pune, Maharashtra

Pune was selected because it is one of India's leading industrial and manufacturing hubs. The city has a strong presence in biotechnology, engineering, automotive components, specialty chemicals, medical devices, technical textiles, and industrial instrumentation. Pune also hosts many founder-led and innovation-driven companies that align with DeepThought's target profile.

3. Industry Segments Considered

The research focused on the following approved DeepThought segments:

Basket A – Specialty Manufacturing

- Specialty Biotech
- Specialty Diagnostics & Life Science Tools
- Custom Synthesis & Specialty Chemicals
- Performance Chemicals

Basket B – Adjacent Specialty

- Medical Devices
- Industrial Sensors & Instrumentation
- Specialty Food & Nutraceutical Ingredients
- Complex APIs & Regulated Pharma

Basket C – Operator-Led Specialty

- Precision Auto Components & Engineering
 - Technical Textiles & Specialty Yarns
-

4. Research Sources Used

The following sources were used during the research process:

- Official Company Websites
- LinkedIn Company Pages
- F6S Startup Directory
- IndiaMART
- TradeIndia
- Google Search
- Company About Us Pages
- Product Catalogs and Company Profiles

These sources helped verify company activities, products, leadership information, and business operations.

5. Research Process

Step 1: Understanding the Federer Profile

Before beginning the research, the DeepThought assignment instructions and Federer Company criteria were studied carefully. The focus was on identifying growth-oriented, founder-led organizations that manufacture specialized products and show evidence of innovation, expansion, or capability building.

Step 2: Company Identification

Relevant Pune-based companies were identified using company directories, Google searches, LinkedIn, and startup databases.

Example searches included:

- Pune biotechnology companies
- Pune medical device manufacturers
- Pune specialty chemical manufacturers
- Pune precision engineering companies
- Pune industrial instrumentation companies

Step 3: Company Verification

Each company's official website was reviewed to verify:

- Products manufactured
- Industry segment
- Company location
- Business activity
- Leadership information

Step 4: Data Collection

The following information was collected for each company:

- Company Name
- Website
- City / Location
- Industry Segment
- Products Manufactured
- Revenue Band (where available)
- Decision Maker
- Producer Status
- Accessibility Status
- Federer Criteria Scores
- Overall Verdict

Step 5: Qualification and Filtering

Companies were filtered based on DeepThought's qualification criteria.

Companies were excluded if they:

- Operated mainly as traders or distributors
- Were service-only businesses
- Had no active website
- Did not belong to approved segments
- Showed limited evidence of manufacturing activity

Step 6: Scoring and Analysis

Each company was evaluated using available evidence from public sources.

The assessment included:

- Product differentiation
- Growth indicators
- Leadership strength
- Manufacturing capability
- Innovation potential
- Market positioning

Based on this evaluation, a Federer Score and overall fit assessment were assigned.

6. Inclusion Criteria

Companies were included if they:

- Manufacture specialized products
- Operate within approved DeepThought segments
- Have an active website and public information

- Show evidence of growth, innovation, or expansion
 - Appear to be founder-led or management-driven businesses
-

7. Exclusion Criteria

Companies were excluded if they:

- Were primarily traders or distributors
 - Were service-only organizations
 - Had insufficient public information
 - Were inactive or outdated
 - Did not match the approved target segments
-

8. Challenges Faced

Several challenges were encountered during the research process:

- Revenue information was unavailable for many private companies.
 - Leadership details were not always publicly available.
 - Some companies provided limited information on their websites.
 - Public information had to be verified from multiple sources before final selection.
-

9. Tools Used

The following tools were used:

- Microsoft Excel
 - Google Search
 - LinkedIn
 - F6S
 - IndiaMART
 - TradeIndia
 - GitHub
-

10. Key Learnings

This assignment helped develop practical skills in:

- Company Research
- Business Analytics
- Industry Profiling
- ICP Qualification
- Data Collection and Validation
- Manufacturing Sector Analysis
- Business Development Research

The research process also provided a better understanding of how to identify and evaluate companies that align with a specific ideal customer profile.
